COURSEWORK

Module	Internet Technology
Coursework Title	POS System
Coursework Type	Practical Exercise

Web Based Point of Sale System Project

Overview

In this assignment, students are required to design and develop a simple responsive Point of Sale (POS) system using HTML, CSS, and JavaScript. The project should demonstrate practical skills in frontend development, responsive design, user interaction handling, and effective UI design.

Learning Outcomes

By completing this assignment, students will be able to:

- Understand the basic structure of a POS system.
- Apply HTML, CSS, and JavaScript to create interactive and responsive web applications.
- Design websites that are fully responsive and user-friendly
- Develop problem-solving skills through real-world retail scenarios.
- Use GitHub for version control and deployment
- Improve creativity by designing unique shop themes with POS functionality.

Description

You will implement a POS system for one of the following shops. Each theme has its own scenario and requirements.

1. **GrillMaster POS** (Burger Shop)

Scenario: A fast-food burger shop requires a POS system to manage customer orders. The system should allow users to:

- Select burgers, fries, and drinks
- Calculate the total price and display an order summary
- Manage customers, products, and orders with full CRUD operations

2. **FashionRack POS** (Clothing Shop)

Scenario: A fashion retail shop needs a POS system for selling clothes. The system should allow users to:

- Choose items by category (shirts, pants, accessories)
- Apply discounts and generate receipts
- Manage customers, products, and orders with full CRUD operations

3. **DailyMart POS** (Supermarket)

Scenario: A supermarket requires a POS system to manage grocery sales. The system should allow users to:

- Add multiple products to the cart
- Calculate subtotals, tax, and final bill
- Manage customers, products, and orders with full CRUD operations

Note: The website must be fully responsive and properly viewable on mobile, tablet, and desktop devices.

Submission Requirements

You must submit the following via the LMS submission section:

1. The public link to your deployed website on GitHub Pages.
2. The GitHub repository link contains your project source code.
3. A .zip file containing your complete project folder, including HTML, CSS, JS, images, and other assets

Deadline

- **Refer to the LMS for the official deadline date**

Late submissions will negatively impact your academic progress and may affect your final evaluation

Important: Your project must be fully completed and deployed before the viva evaluation date. Incomplete projects will not be accepted for viva.
